## Information about Copyrighted Content

Some instruments administered for studies archived with ICPSR may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

### NOTICE

#### WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

## **Documentation of Post-Stratification Weights** **Created for MIDUS 3**

This document describes how the MIDUS 3 (M3) post-stratification weights were created. Weights were only calculated for cases from Main RDD sample that completed the M3 telephone interview.

M3 weights use the same weighting procedure as the M2 weights. Because no sampling was conducted for the 2<sup>nd</sup> and 3<sup>rd</sup> wave follow-up studies, only population-based adjustments were created for M2 and M3. The M3 weights described in this document were created using a population-based adjustment called a post-stratification weight. It is a *post*-stratification weight because it is computed *after* the data are collected. The *stratification* part comes from the use of various known strata (such as age group, or sex distribution) of the population to which the new data are adjusted to better conform to the population's parameters.

In order to calculate a post-stratification weight, an auxiliary dataset that contains the population socio-demographic characteristics is needed to which the sample data are compared. M3 used the October 2013 Current Population Survey (CPS) data derived from the Census Bureau. CPS data show the demographic characteristics of the U.S population at a comparable time to which the M3 data were collected. (See [www.census.gov/cps/](http://www.census.gov/cps/)).

The M3 weights discussed in this document are included in the aggregate survey dataset titled:

M3\_P1\_SURVEY\_N3294\_20181219.sav

Here is the list of relevant weight variables and the strata characteristics on which they were computed:

C1PWGHT1 = Region x Age x Education  
C1PWGHT2 = Gender x Age x Education  
C1PWGHT3 = Race x Age x Education  
C1PWGHT4 = Region  
C1PWGHT5 = Gender  
C1PWGHT6 = Age  
C1PWGHT7 = Education  
C1PWGHT8 = Race  
C1PWGHT9 = Marital Status  
C1PWGHT10 = Race x Age x Education x Gender

The first step in creating the M3 post-stratification weights was to decide which demographic variables to correct for in the M3 sample. For the M3 RDD Phone (N= 1,414) sample the percentages among for the six demographic variables (Region, Sex, Race, Age, Education, and Marital Status) were compared to the population percentages (Table 1). The largest discrepancies observed between the sample and population percentages were among Region, Race, Education and Age categories. Therefore, the M3 weights discussed in this document are six simple univariate weights and four multivariate post-stratification weights that simultaneously correct multiple sociodemographic characteristics. This is a similar weighting scheme to that used with the M2 RDD Phone sample.

To calculate simple univariate weights, the population proportion among strata for each demographic variable was divided by the sample proportion, resulting in six univariate weights for Region, Sex, Race, Age, Education, and Marital Status. These univariate weights are displayed in Table 1 below.

Table 1. Comparison of M3 Phone sample with the Current Population Survey (October, 2013) and constructed univariate weights.			
<b>MIDUS Refresher</b>	<u>CPS (October 2013) <sup>1</sup></u> (N=56,383)	<u>Unweighted M3 Phone data</u> (N=1,414)	<u>Univariate Weights M3 Phone data<sup>2</sup></u> (N=1,414)
	%	%	
REGION <sup>3</sup>			
Midwest	23.1	29.3	0.79
Northeast	21.4	16.8	1.27
South	31.6	33.0	0.96
West	23.8	20.9	1.14
SEX			
Male	46.9	47.3	0.99
Female	53.1	52.7	1.01
RACE			
White	84.1	87.5	0.96
Black	9.4	5.0	1.88
Others	6.6	7.5	0.88
AGE			
45-54	33.1	24.3	1.36
55-64	30.9	28.4	1.09
65-74	20.7	27.2	0.76
75-84	11.0	16.2	0.68
85-94	4.4	3.9	

<sup>1</sup> CPS data filtered by age: >= 45

<sup>2</sup> Values are based on the univariate weights: = C1PWGHT4, C1PWGHT5, C1PWGHT6, C1PWGHT7, C1PWGHT8, C1PWGHT9

<sup>3</sup> Note that while Census Region is used to compute post-strat weights, it is not released in the publicly available datasets.

EDUCATION			
Less than 12	11.5	5.5	2.09
12 years	32.9	24.1	1.37
13 – 15 years	26.0	29.7	0.88
16 years or more	29.7	40.6	0.73
MARITAL			
Married	63.3	64.2	0.99
Not married	36.7	35.8	1.03

In addition to the six univariate weights, four multivariate weights were created to adjust for multiple sociodemographic characteristics. Table 2 and 3 illustrate the distributions of two of these weights. Note that the larger weights indicate groups that are under-represented in MIDUS 3. To avoid producing weights with a value of “infinity” all zero-count cells were replaced with “1.” These cells are indicated by **bolded weights** in Table 2 and 3.

Table 2. Post-stratification weights created using Region, Education, and Age strata (C1PWGHT1).						
Education	Region	Age				
		45-54	55-64	65-74	75-84	85-94
